## EDUCATION

### Khaitan Public School

Secondary (Class X) : 98.8%

Senior Secondary (Class XII) : 94.8%

2011 - 2024

### Jaypee Institute of Information Technology

BTech in Computer Science Engineering

(Core) - CGPA : 8.4

2024 - 2028

## SKILLS

- Languages: Python, C++, Java
- Web Development: HTML, CSS, JavaScript, React
- Backend: Flask (Learning & Implementation)
- Core Concepts: Data Structures & Algorithms, OOPS, DBMS
- Tools: Git, GitHub, Figma
- AI/ML: Machine Learning, Data Analysis (scikit-learn, basics)

## LANGUAGE

English (Fluent)

Hindi (Native)

## ABOUT ME

Focused on building real-world, AI-driven systems.

Experience in full stack development using JavaScript and Flask.

Actively developing scalable platforms across civic-tech, agri-tech, healthcare, and productivity domains.

Continuously improving systems by applying backend integration and machine learning concepts

## PROJECTS

### PulseCity – Civic Issue Reporting Platform (Ongoing)

- Building a civic-tech platform using **React/JS frontend** and **Flask backend integration**
- Designing a smart routing system using **keyword-based classification (ML logic)** and priority scoring algorithms
- Implementing a reward-based system using user activity tracking and state management
- Integrating with **geolocation APIs (Google Maps API)** for geo-tagged issue reporting
- Structuring the system to support scalable issue routing workflows

### Workstyle Intelligence Platform – AI Productivity & Behavior Analysis System (Ongoing)

- Developing a productivity analytics system using **Python (data processing and analysis)** and **JavaScript (frontend tracking)**
- Tracking task completion, focus time, and activity trends using structured data collection and local storage/session tracking
- Working with machine learning models (**scikit-learn**) for pattern recognition

### TalentSync AI – Resume Screening & Skill Gap Analysis Platform

- Developed using **Python, NLP**, and **machine learning** workflows
- Performed data **preprocessing, feature engineering, skill normalization**, and synthetic data generation on resume/job datasets
- Implemented **resume parsing, semantic skill extraction, TF-IDF vectorization, and cosine similarity-based matching**
- Built automated skill-gap analysis, candidate scoring, and ranking pipelines using structured data models
- Worked on **data visualization**, explainable scoring mechanisms, and modular system design

### KrishiNect – Smart Agriculture Web Platform

- Developed a **multilingual** agri-tech platform using **HTML, CSS, JavaScript**, enabling crop listing, mandi price tracking, and farmer connectivity
- Built an output marketplace module using **JavaScript (DOM manipulation, event handling)** for direct farmer-to-buyer transactions
- Designed dynamic dashboards with **JavaScript, JSON-based data structuring, and responsive UI design** for real-time price insights
- Implemented peer-to-peer communication interface using state management and form handling using **JavaScript**
